

Fourth Semester B. Tech. (Electronics and Communication Engineering) Examination

PROBABILITY THEORY AND STOCHASTIC PROCESSES

Time : 3 Hours]

[Max. Marks : 60

Instructions to Candidates :—

- (1) All questions are compulsory and carry marks as indicated.
- (2) Assume suitable data wherever necessary.
- (3) Due credit will be given to neatness.
- (4) Use of Non – programmable calculator is permitted.
- (5) Use of Standard Normal Distribution Table is permitted.

1. (a) A card is drawn from a deck of cards, What is the probability that the card drawn is :
 - (i) King or Heart.
 - (ii) Ace or King.
 - (iii) Heart or Spade. 5(CO1)
- (b) An insurance company insured 2000 scooter drivers, 4000 car drivers and 6000 truck drivers. The probability of an accident involving a scooter driver, car driver and a truck driver is 0.01, 0.03 and 0.015 respectively. One of the insured person meets with an accident.
 - (i) What is the probability that he is a scooter driver ?
 - (ii) What is the probability that he is not a scooter driver ? 5(CO1,5)
2. (a) Consider a function –
 $f(x) = Ae^{-ax}$; $x > 0$, denotes the PDF of a random variable X.
 - (i) Find the relation between A and a.
 - (ii) Calculate the mean of X.
 - (iii) Calculate Variance of X. 5(CO1,3,5)

- (b) A discrete random variable X has the following probability distribution :

x	0	1	2	3	4	5	6	7	8
f(x)	a	3a	5a	7a	9a	11a	13a	15a	17a

Find :

- (i) The value of constant a ,
- (ii) $P(X \leq 2)$,
- (iii) The mean of X . 5(CO1,5)

3. (a) The annual salaries of the employees in a large company are approximately normally distributed with a mean of Rs. 50,000 and a standard deviation of Rs. 20,000. What percentage of people earn

- (i) Less than Rs. 40,000 ?
- (ii) Between 45000 and 65000 ?
- (iii) More than 70000 ? 5(CO1,3,5)

- (b) A machine has fourteen identical components that function independently. It will stop working if three or more components fail. If the probability that the components fails is 0.1, find the probability that the machine will be working. 5(CO1,5)

4. (a) A random sample of size 100 is taken from a population whose mean is 60 and variance is 400. Using Central Limit theorem find with what probability can we assert that the mean of the sample will not differ from $\mu = 60$ by more than 40. 5(CO1,3)

- (b) Define Markov's inequality. Derive the equation for Markov's inequality for Continuous and Discrete Random Variable. 5(CO1,3)

5. (a) What do you understand by Random processes ? Give classification of Random Processes. 5(CO2)

- (b) Given a Stationary Random Process –
 $X(t) = 10 \cos[100t + \theta]$, where θ is a random variable with uniform probability distribution in the interval $[-\pi, \pi]$. Compute Mean and Autocorrelation of $X(t)$.
 5(CO2)
6. (a) Explain in detail about the processing of Random Signals through an **LTI** system.
 5(CO2,4)
- (b) A circuit has an impulse response given by
- $$h(t) = \frac{1}{2}T, \quad 0 \leq t \leq T$$
- $$= 0, \quad \text{elsewhere}$$
- Evaluate $S_{YY}(w)$ in terms of $S_{XX}(w)$.
 5(CO2,4)

Standard Normal Cumulative Probability Table

Cumulative probabilities for NEGATIVE z-values are shown in the following table:

z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
-3.4	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003	0.0002
-3.3	0.0005	0.0005	0.0005	0.0004	0.0004	0.0004	0.0004	0.0004	0.0004	0.0003
