

Course Code : ECT 258

QTSR/RW – 24 / 1571

**Fourth Semester B. Tech. (Electronics and Communication Engineering)
Examination**

MICROPROCESSORS

Time : 3 Hours]

[Max. Marks : 60

Instructions to Candidates :—

- (1) All questions carry marks as indicated.
- (2) Due credit will be given to neatness and diagrams.
- (3) Use of electronic gadgets leaving scientific calculator is not allowed.
- (2) Assume suitable data wherever necessary.

1. (a) Explain addressing modes of 8085 microprocessor with examples. 5(CO1)
(b) Write a program for 8085 to transfer 100 bytes of data from 8000h to 9000h respectively using loop. Explain the same with a flow chart. 5(CO2)
2. (a) Draw Interfacing diagram for interfacing memory with 8085 microprocessor such that it should contain 16 kbyte of EPROM and 08 kbyte of RAM. 5(CO2,3)
(b) Write a program for 8085 to convert 20 bytes of packed BCD number to its ASCII value. Assume data source as A000h and result destination as A500h respectively. 5(CO2)
3. (a) Explain with neat waveform Timing diagram of “LHLD 6789H”. 5(CO1,3)
(b) Explain with BSR and IO mode of 8255 with CWR formats and examples. 5(CO2)

4. (a) Compare advantages and disadvantages of 8085 and 8086. 5(CO1)
(b) Explain the working of following 8086 instructions :
(i) MOV BX, DS:[2000h]
(ii) SUB AX,[SI] 5(CO2)
5. (a) Explain what do you understand by Pipelining in 8086. 5(CO3)
(b) Write an Assembly Language program to demonstrate 2's complement operation in 8086 for 100 bytes of data conversion present in data segment 4000h onwards. 5(CO2)
6. (a) Explain real and virtual mode of operation in 8086. 5(CO4)
(b) Recall and explain the important features of Intel 386 microprocessor. 5(CO4)
